

Good skin care is essential to maintaining an active and healthy lifestyle. Some easy tips to help prevent skin breakdown are:

- ✓ Clean skin daily with mild soap
- ✓ If person is incontinent, remove soiled clothing and provide skin with thorough cleaning
- ✓ If person is immobile or non-ambulatory, assist them in alternating their position frequently
- ✓ Provide adequate nutrition and hydration, and consider nutritional consult
- ✓ Check pressure points such as heels and buttocks for signs of redness or irritation
- ✓ Apply “as needed” medications and lotions as ordered by the physician

In some cases, skin breakdown can become so severe that a wound or pressure ulcer is formed. In these cases, the physician may suggest that a person visit a wound care center or clinic. The following are a list of wound care centers in your area.

If you believe someone you support requires the services of wound care specialists, please contact the primary care provider.

Disclaimer:

We have compiled the following wound care specialist contacts for each county based upon information gathered from local hospitals, home health agencies and the internet. This list is not exhaustive and there may be other wound care providers in each county that are not mentioned simply because their contact information was not available through the resources reviewed. Under no circumstances is Community Health Connections lending their endorsement to any of the listed contacts. Please consult with the physician regarding referral to a wound care specialist.

For further listings, check your local phone directory under "Nursing" for other home health agencies.
